BLACK MULCH GROUND COVER

Black Mulch Ground Cover is produced in 50gsm spun-bonded polypropylene. It is ideal for landscaping and horticultural applications, as weed suppressant, soil and gravel separator or base for bark chippings. Crops such as strawberries may be planted through, ensuring the fruit does not touch the damp earth, thereby rotting.

Final determination of the suitability of the material is the sole responsibility of the user.

NETTING/CAPILLARY MATTING/BENCH COVER FILM

WINDBREAK NETTING

- Windbreak Nettings are knitted from tough monofilament thread.
- They are designed to maximize crop and plant protection against wind damage, by creating a less turbulent environment.
- The plants grow stronger, thanks to reduced physical damage and root rocking.
- They also reduce transpiration.
- 130g/m²
- 50% shade.

FLEECE/SHEET PEGS

Crop Covering for Commercial Horticulture

Fleece (17g/m²)

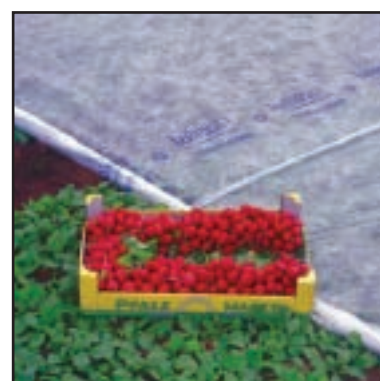

Protection Fleece can be used to protect from frost, wind, hail, birds and insects. The material simply floats on top of the crops without damaging the young plants, providing them with the ideal growing environment. Because the fleece helps to warm up the soil, earlier harvesting can also be achieved, producing crops that are healthier, more abundant and not damaged by insects or the weather. It will also diffuse strong sunlight, reduce transpiration and is permeable to air and water.

Lutrasil Fleece (30g/m² and 60g/m²)

- Provides winter covering for vegetable crops and ornamental plants
- Provides shade for herbaceous plants and tree nurseries
- Excellent durability, strength and tear resistance
- Consistent continuous fibres providing climate control whilst creating the best growth conditions for your horticultural crops
- Strong endless fibres providing high durability and strength in all directions
- A flexible crop covering resistant to high winds
- Protection climate barrier for all horticultural crops
- Excellent water permeability, limiting water retention held in the cross section of the non-woven thereby minimizing any damage to the crop below
- Optimum protection against pests
- Balanced temperature and humidity distribution
